Republic Services Signs Agreement to Install OPS Eco-Pur Oil Cleaning System on All New 2011 Trucks

*Leading waste services provider expands product implementation to extend oil drain intervals
and minimize negative effects to environment*

Waterbury, Conn. – May 10, 2011 – Oil Purification Systems (OPS) (www.ops-1.com)

announced today that Republic Services, Inc. (NYSE:RSG), a leading provider of recycling and solid waste services, has signed an agreement to install the OPS Eco-Pur fluid cleaning system on all new 2011 Republic Services' trucks. With more than 1,000 systems already installed, this agreement reflects the company's commitment to expand product implementation. The Eco-Pur system allows Republic Services to safely extend oil drain intervals and minimize waste oil for a cleaner environment.

"Oil samples don't lie. Our analysis shows that we can safely extend oil drain intervals on even our dirtiest vehicle types, and we are targeting specific vehicles to extend even longer," said Roy Svehla, senior manager for corporate maintenance at Republic Services. "OPS worked closely with us in tracking and monitoring oil samples at multiple locations to ensure that the oil was clean and our equipment was running as efficiently as possible."

Republic is installing the Eco-Pur system at their body manufacturers on new 2011 vehicles prior to delivery, and plans to work directly with their chassis manufacturers to install the Eco-Pur system on new deliveries from 2012 going forward. The OPS Eco-Pur system is the first and only supplemental filtration system that uses advanced electronic controls to continuously

optimize the cleaning process and remove both solid and liquid contaminants from lubricating oil. The system continuously monitors temperature, pressure and flow to optimize the evaporation process based on an engine's real-time operation.

“The return on investment is motivating more waste services companies to adopt improved oil maintenance programs to extend the life of their equipment, while also being more environmentally responsible,” said Vince Polentes, vice president of OPS' Waste Services division. “Republic Services' decision to implement the system on all its new trucks is a testament to the proven benefits they have already seen, and also reinforces the rigorous design standards and extensive field testing that OPS has put into the Eco-Pur system.”

About Republic Services

Republic Services, Inc. provides recycling and solid waste collection, transfer and disposal services in the United States and Puerto Rico. The company's various operating units, including collection companies, transfer stations, recycling centers and landfills, are focused on providing reliable environmental services and solutions for commercial, industrial, municipal and residential customers. For more information, visit the Republic Services website at www.republicservices.com.

About Oil Purification Systems

Oil Purification Systems, Inc. manufactures a family of fluid cleaning products, including the Eco-Pur System, the first and only supplemental filtration system that uses electronic controls to continuously optimize the cleaning process and remove both solid and liquid contaminants from lubricating oil. The Eco-Pur is used by hundreds of fleets on thousands of vehicles and generators in trucking, busing, construction, mining and many other applications. Eco-Pur users have dramatically reduced oil consumption, cut oil maintenance costs by 80 percent, and extended equipment life. Eco-Pur is also an effective solution for corporate environmental sustainability programs. Founded in 2002, OPS is headquartered in Waterbury, Conn.
